

Recent Advances in Materials for Piezoelectric Transducers

Dragan Damjanovic

Group for Ferroelectric and Functional Oxides

Swiss Federal Institute of Technology at Lausanne, 1015 Lausanne, Switzerland

Dragan Damjanovic: dragan.damjanovic@epfl.ch

Recent advances in materials for piezoelectric transducers are reviewed. Insights into crystal anisotropy, domain engineering and nature of the morphotropic phase boundary; lead-free piezoelectric materials; mesoscopic structure of relaxor-ferroelectrics; and new materials for operation of transducers at high temperature and other extreme conditions will be discussed.
